The **online** language revolution

Enabling multilingual user interfaces for web applications

## Challenge

- Users want to use software in their own language
- Lots of software comes in just one language
- Making software multilingual requires:
  - **Translation:** Language Pack (LP) creation
  - **Technology:** Software change to switch LPs
- Software change = (large) expense, time, resource

## Challenge

They considered that modifying these systems would be expensive and impractical.

... the [online] service available to their [users] .... provided in English only at present ... a breach of contract with their current provider and that they would incur costs for this.

... does not allow for the service to be provided through the medium of Welsh at present. This means that a brand new system would need to be created in order to comply.

... electronic HR software used to record leave, absences and flexible working is only available in English at present.

... their IT systems would require significant investment in order to fulfil all the requirements of the standards ...

## Relevant Standards

57	Service Delivery	All apps that you publish must function fully in Welsh, and the Welsh language must be treated no less favourably than the English language in relation to that app.
----	------------------	--

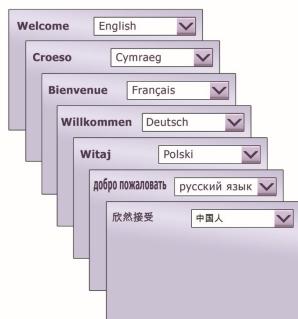

120	Operational	You must provide staff with computer software for checking spelling and grammar in Welsh, and provide Welsh language interfaces for software (where an interface exists).
-----	-------------	---

& where software apps supports specific business processes (HR, Job Apps, etc.)

## LinguaSkin®

The **online** language revolution

- Multilingual User Interfaces
- Non-invasive
- SEO Optimisation
- Quick Implementation
- Compliance & CSR
- Single Base Application
- On-the-fly Content Change
- Language Selection Tracking
- Easy Language Addition

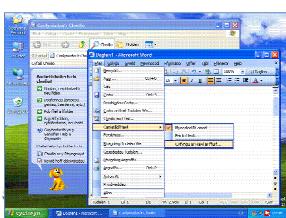

## Benefits

- Impossible becomes possible
- Quick & low impact implementation
- SEO optimisation and flexibility
- Single base application reduces operational cost
- Quicker and (significantly) cheaper than alternates
- Internationalisation: Bilingual or fully multilingual
- Autonomy, flexibility & savings for UI content changes
- Independence from vendors (procurement options)
- Unify applications across countries/regions
- New market access (international)
- Agility and reaction time (config vs dev/release)
- Benefits beyond language (accessibility, etc.)

## Background

- Proof-of-concept developed by Draig Technology '07-'11
- IPR acquired by Interceptor Solutions Ltd (ISL) 2012
- ISL focus on multilingual software continues Draig work:
  - To Bach (200k+ users) – now available from ISL
  - Welsh Windows, Office and multilingual SharePoint
  - Language control centre (Welsh & Basque)
  - Bilingual software standards (WLB/CyG)
